

STRATEGIC PRIORITIES

Security Transformation
 Transform security from business inhibitor to business enabler with an information-centric approach that is driven by policy and operationalized across your infrastructure.

Data Center Transformation
 Reduce IT complexity, improve operational efficiency, and transform the data center into a driver of business value and innovation.

Information Risk Management
 Secure and manage unstructured information with solutions that protect data at rest and in motion, guard against data loss, reduce storage costs, and enable automated discovery.

Endpoint Transformation
 Meet the challenges of endpoint lifecycle management with innovative technologies for securing and managing clients and servers, automating operational workflows, and delivering applications.

STRATEGIC PRIORITIES
Strategic frameworks for a holistic approach to addressing long-term business and IT goals.

Security Transformation
Transform security from business inhibitor to business enabler with an information-centric approach that is driven by policy and operationalized across your infrastructure.

Data Center Transformation
Reduce IT complexity, improve operational efficiency, and transform the data center into a driver of business value and innovation.

Information Risk Management
Secure and manage unstructured information with solutions that protect data at rest and in motion, guard against data loss, reduce storage costs, and enable automated discovery.

Endpoint Transformation
Meet the challenges of endpoint lifecycle management with innovative technologies for securing and managing clients and servers, automating operational workflows, and delivering applications.

SECURITY
Manage and secure infrastructure, information, and interactions against a growing array of increasingly sophisticated threats.

Security Management
Optimize key security processes and link these to security and compliance policies to identify threats and protect your organization against security attacks.
IT Projects:
Security information & event management
Log management
Security posture visibility

Endpoint Security
Improve threat monitoring and reduce the administrative burden of protecting endpoints against known and unknown threats.
IT Projects:
Access control
Security software consolidation
Threat management

Messaging Security
Protect business information against threats from inbound and outbound email and instant messages (IM) with integrated antispam, antivirus, and content filtering technologies.
IT Projects:
Protection from email and IM malware & viruses
Spam blocking

INFRASTRUCTURE OPERATIONS
Standardize, automate, and consolidate infrastructure operations to reduce complexity, reduce costs and improve efficiency.

Server Management
Discovery, provision, manage, secure, monitor, backup and recovery physical and virtual servers to maximize uptime.
IT Projects:
Server discovery & inventory
Server provisioning
Server software & patch management
Server monitoring & alerting
Server configuration management
Server recovery

Client Management
Reduce operational costs and protect desktops, laptops, and handheld devices with automated deployment, management, and remote troubleshooting.
IT Projects:
Client discovery & inventory
Imaging & provisioning
Client software & patch management
Application packaging
Remote management
Client recovery

IT Service Management
Actively manage the entire asset lifecycle and align service resources with ITIL to optimize your IT investments.
IT Projects:
Asset management
License usage & compliance
Service management
Change & configuration management
Business process management

Virtualization Management
Protect and manage your virtualized infrastructure with tools for backup and recovery, storage management, and high availability and disaster recovery.
IT Projects:
Data protection for virtualization
High availability for virtualization
Disaster recovery for virtualization
Storage management for virtualization

Endpoint Virtualization
Instantly provision and protect endpoints while reducing costs and increasing productivity with streaming, virtualization and desktop broker technologies.
IT Projects:
Application license management
On-demand application delivery
Endpoint disaster recovery
Application conflict resolution
Remote & portable desktop access

INFORMATION RISK & COMPLIANCE
Ensure compliance with external regulations and internal policies for securing and managing information.

IT Compliance
Automate key IT compliance processes to reduce IT risk and operational cost and achieve internal and external compliance objectives.
IT Projects:
IT compliance automation
IT controls management

Discovery & Retention Management
Capture, classify, and store email, instant messages, SharePoint content and files to enforce retention policies, simplify discovery, and reduce storage costs and management overhead.
IT Projects:
Legal discovery & response
Records retention, discovery, & management

Data Loss Prevention
Discover, monitor, and protect confidential data wherever it is stored or used.
IT Projects:
Customer data protection
Data security compliance
Endpoint data protection
Intellectual property protection
Laptop theft
Storage data clean-up

STORAGE
Optimize the way information is managed throughout its lifecycle to derive maximum value from your information assets.

Storage Management
Standardize and automate the management of heterogeneous storage platforms to maximize storage utilization, increase IT responsiveness, and lower infrastructure and operational costs.
IT Projects:
Storage consolidation
Storage management
Storage resource & capacity management
Storage virtualization

Archiving
Automate the retention and storage of email, files, instant messages, and other unstructured content in accordance with IT policies.
IT Projects:
Email archiving
Email migration
SharePoint archiving

Data Protection
Prepare for and recover both data and systems in instances of equipment failure, accidental loss of data, or a disaster.
IT Projects:
Backup & recovery
Remote office data protection

BUSINESS CONTINUITY
Define, implement, and manage solutions to protect against the effects of planned and unplanned downtime.

Disaster Recovery
Meet your business recovery objectives across technologies and data centers by automating backup and recovery, application clustering, and data replication.
IT Projects:
Business continuity planning
Disaster recovery

High Availability
Protect mission-critical applications and data against planned and unplanned downtime by automating application recovery across physical and virtual environments on major application, server, and storage platforms.
IT Projects:
Eliminating planned downtime
High availability
